SHANJAI SENTHIL

Full Stack Developer | React.js | TypeScript | Node.js

Nearly 3 Years of Experience | FinTech | Algorithmic Trading | Production Applications

Bengaluru, Karnataka 560083 | +91 9659675152 | shanjaisenthil10@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Full Stack Developer with nearly 3 years of experience building and maintaining production web applications using React.js, TypeScript, JavaScript, Node.js, Express.js, REST APIs, MySQL, and MongoDB. Experienced in developing reusable and responsive interfaces, API-driven workflows, state management, authentication, form validation, and data-intensive application features. Hands-on experience delivering FinTech and algorithmic trading platforms involving broker integrations, order management, watchlists, position management, and real-time trade monitoring. Experienced working with backend, product, and engineering teams in Agile environments to deliver features, troubleshoot production issues, and improve application functionality.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, AngularJS, Tailwind CSS, Ant Design, Responsive Design, Reusable Components, Conditional Rendering

Backend: Node.js, Express.js, REST APIs, API Integration, API-driven Development

State & Data Fetching: TanStack Query, Recoil, Axios

Databases: MySQL, MongoDB

Core Development: Authentication, Form Validation, Localization, Responsive UI, Debugging, Production Support

Tools & Practices: Git, GitHub, Agile Development, Code Reviews, Pair Programming, Troubleshooting

PROFESSIONAL EXPERIENCE

Software Developer **December 2024 - Present**

FINOLAB TECHNOLOGIES | Bengaluru, India

Trading Terminal Platform - Algoninja

Technologies: AngularJS, Node.js, Express.js, MySQL, REST APIs

- Contributed to a scalable **multi-tenant SaaS trading platform** supporting white-label algorithmic trading businesses and multiple broker integrations.
- Engineered end-to-end trading workflows for **automated strategies, multi-broker order execution, watchlists, position management, and real-time trade monitoring** .
- Integrated AngularJS frontend modules with **Node.js and Express.js REST APIs** supporting trading operations, user management, real-time data, and platform administration.
- Implemented production workflows covering **authentication, order placement, position management, subscriptions, auto-renewal, trade logging, and audit trails** .
- Worked with **MySQL-backed trading, user, transaction, and operational data** while troubleshooting production issues and delivering feature enhancements in an Agile environment.

Broker Configuration & Static IP Management Platform

Technologies: AngularJS, React.js, Express.js, MySQL

- Developed React.js and AngularJS interfaces for **static IP configuration, management, and validation** across broker-specific trading workflows.
- Integrated frontend workflows with backend services to manage **broker, user, static IP, and trading configuration data** .
- Implemented validation and conditional rendering for **broker-specific configuration requirements** and workflow scenarios.
- Developed MySQL-backed workflows for managing **static IP, broker, user, and trading configuration data** .
- Collaborated with backend and trading-platform teams to **integrate services, troubleshoot defects, validate functionality, and deliver production enhancements** .

Broker API Credential Management Platform

Technologies: React.js, Ant Design, REST APIs

- Developed responsive React.js interfaces for **broker API key and credential-management workflows** using Ant Design.
- Built API key and secret generation workflows with **form validation, controlled inputs, conditional rendering, and REST API integration** .
- Integrated frontend modules with backend **authentication and credential-management services** through REST APIs.
- Designed reusable React components and structured UI workflows to improve **maintainability and consistency** across application features.
- Worked with backend developers to integrate **authentication, credential-management, and broker-integration workflows** .

Software Developer - Frontend **November 2023 - November 2024**

SAILBOAT TECHNOLOGIES | Bengaluru, India (Remote)

Vendor Relationship Management (VRM)

Technologies: React.js, TypeScript, Recoil, TanStack Query, REST APIs, Ruby

- Developed responsive and reusable **React.js and TypeScript interfaces** supporting vendor management and business operations.
- Implemented **vendor onboarding, vendor information management, and business workflow features** across the application.
- Integrated REST APIs using **TanStack Query** to fetch, update, cache, and synchronize application data.
- Implemented **Recoil-based state management** to coordinate shared application state across vendor workflows.
- Built reusable components, form-validation workflows, conditional rendering, and interactive UI features for complex business requirements.
- Partnered with backend developers and product teams to **integrate APIs, troubleshoot production issues, and deliver business-critical features** .
- Participated in **code reviews and pair-programming sessions** to improve code quality, maintainability, and knowledge sharing.

KEY ACHIEVEMENTS

- Delivered features across **FinTech and algorithmic trading platforms** covering automated trading, order placement, watchlists, position management, broker integrations, and real-time trade monitoring.
- Implemented broker-focused solutions including **static IP configuration workflows and API credential generation** to support broker integration requirements.
- Migrated approximately **70% of applicable Recoil implementations** to TanStack Query hooks as part of improving server-state management and data-fetching workflows.
- Implemented **i18next localization** to support multiple languages and improve the application's internationalization capabilities.

EDUCATION

Bachelor of Engineering (B.E.) - Computer Science and Engineering

Adhiyamaan College of Engineering, Hosur

May 2023 | CGPA: 8.20
